

Ramakrishnan Raja (M'11) received B.Sc. degree from Amrita Institute of technology, India in 2003 and Master's Degree in electrical engineering from New Jersey Institute of Technology, in 2005. He received his Ph.D. degree in automotive system engineering from University of Michigan-Dearborn, MI. From 2004-2013 he has been working for Delphi steering and Nexteer automotive as Senior Electrical Engineer. Currently he is working at Halla mechatronics as Chief Scientist-Controls. He is responsible for motor drive /Vehicle Dynamics control for various automotive applications. His research interest includes electrical machines and variable speed drives including sensorless motor control drives. His recent works includes developing redundant motor drive architecture (for steering) with complete redundancy such that there is no reduction in system performance after a single point failure. He is presently the Associate Editor for Industrial Drives Committee and Transportation System Committee.
